Press release from: [Cockpit4u Aviation Service GmbH](#)

With the launch of the new Training program, Cockpit4u is once again raising the bar for innovative training programs across the industry.

“During challenging times of decreasing yields and strong competitive environments airlines have to focus on their cost base. Fuel consumption is a major cost to any airline, and airlines need to focus their attention on this in order to maintain their operation profitable. With the Cockpit4u “Fuel Saving Awareness Training” airlines are able to decrease their fuel costs by 3 – 4% per year due to improved fuel saving operation.”, said Dennis Pilz, Managing Director Cockpit4u.

The program comprises 4 phases: Analysis – Design – Execute – Monitoring. The Cockpit4u experts will analyze the airline operation in order to setup a tailor made ground and simulator training program. After completion the results will be monitored quarterly. The ROI of a typical project will be achieved within the first year.

Cockpit4u is a leading provider of training services to the aviation industry and is set to become the most comprehensive and independent training organization for airlines and individual pilots. Its services cover the complete spectrum from Type Rating, TRI, TRE training and a wide range of airline related cockpit crew training on Airbus, Boeing and Bombardier aircrafts.
