

## **AXIGEN Receives ISO Certification for Excellence in Quality Management**

Date: 11-03-2009 03:19 PM CET

Category: [IT, New Media & Software](#)

Press release from: [Gecad Technologies AXIGEN](#)

AXIGEN, the professional messaging solution vendor, announces today that it has recently received the ISO 9001: 2008 certification that confirms the company's high standards of quality in software development and distribution, and in customer care services. The new certification positions AXIGEN as a more reliable business partner and offers an impartial validation of its professionalism and already existing quality standards.

The ISO 9001:2008 standard specifies Quality Management System (QMS) requirements regarding an organization's ability to meet and improve upon their products and services quality. During the certification process, AXIGEN was required to show proof it had implemented the necessary standards and procedures to improve product and service quality on a regular, quantifiable and verifiable basis, while following a systematic approach to overall quality management.

"As the ISO certification is obtained after a thorough analysis by an independent organization, it stands as an unbiased recognition of AXIGEN's excellence in providing our customers and business partners with quality products and services. This also reiterates our team's expertise and professionalism. Our messaging solutions are already compatible with archiving and emailing standards such as HIPAA and a wide range of RFCs, so certifying our QMS was the next natural step. Other such independent reviews will follow, the first of them analyzing the outstanding performance the AXIGEN technology has reached over the years", said Oana Bornaz, AXIGEN CEO.

One of the top ten messaging solutions in the world according to The Radicati Group, the AXIGEN Mail Server has a strong focus on meeting the needs of business customers, either directly or through Service Providers employing the Software as a Service (SaaS) model. Winner of the ServerWatch 2007 Product Excellence Award for the Communications Server category, AXIGEN runs on several Linux and BSD distributions, on Solaris, on Windows operating systems, on PowerPC and SPARC architectures and is becoming the messaging solution of choice for a growing number of service providers and enterprises worldwide.
