

## Layton Technology Announces Major Upgrade of AuditWizard™, Its Leading PC Audit Software

Date: 11-25-2009 02:08 PM CET

Category: [IT, New Media & Software](#)

Press release from: [Layton Technology Inc](#)

Version 8.1 is a major upgrade of AuditWizard, which has been protecting user companies against software compliance audits since February 2000. Now with a worldwide customer base that exceeds 10,000, AuditWizard contributes directly to the bottom line by reducing the amount of money wasted on maintenance contracts for software that is no longer in use.

“Our PC audit and help desk software solutions always have and always will offer an impressive value proposition to companies of all sizes -- ease of use and richness of functionality at a cost-effective price. AuditWizard 8.1 is the latest example,” said Glenn Powell, project manager of development at Layton Technology, Inc. “It’s never easy to improve a product that has a lengthy record of customer satisfaction. But we have succeeded in doing that with AuditWizard in Version 8.1”

AuditWizard provides user companies with total visibility of network assets. It also enables instant identification of potential security loopholes.

Version 8.1 is a major upgrade because AuditWizard has been re-written in a new programming language. The utilization of .NET has elevated a strength of AuditWizard – ease of use.

Layton Technology has built into Version 8.1 a new user interface, a new dashboard view and a new Simple Network Management Protocol (SNMP) audit function. Reporting can now be performed through the user interface. And the new SNMP feature allows discovery and auditing of all network devices such as routers, printers, switches and hubs.

The net-net is that in Version 8.1, Layton Technology has enhanced the speed, reliability, security and intuitiveness of AuditWizard PC audit while maintaining its cost-effectiveness. All existing customers of AuditWizard PC who are under support audit are entitled to a free upgrade.
