

5th Annual Vierling Autumn Fair

Date: 09-05-2006 08:55 PM CET

Category: [Media & Telecommunications](#)

Press release from: [Vierling Communications GmbH](#)

Vierling to present new products and celebrate its 65th anniversary

Ebermannstadt, Germany.

Vierling's 5th annual Autumn Fair will take place from September 20-22, 2006 at Schloss Atzelsberg near Erlangen, Germany and at the company's headquarters in Ebermannstadt, Germany. This will include a special celebration of Vierling's 65th anniversary. On September 20-21 at Schloss Atzelsberg, Vierling's Mobile Communication Division will be presenting new GSM gateways that companies can use to significantly reduce telecommunications expenditures. Concurrently, Vierling Measurement Solutions will present some new solutions for applications in the areas of line and quality testing for telephone and data networks. On September 22, the Autumn Fair will move to nearby Ebermannstadt. There, the focus will be on development and manufacturing services available from the Vierling Production Division for high-performance electronics. The company celebration of Vierling's 65th anniversary will follow the same afternoon.

Reducing telecommunications costs with GSM gateways

Vierling Mobile Communication will be presenting new GSM gateways with applications that can complement existing PBXs. GSM gateways have built-in mobile radio modules, their own GSM antennas, VoIP interfaces and integrated ISDN call-by-call solutions. Gateways offer a reliable way to reduce telephone expenditures. "Our product managers will present our current gateway solutions along with their extended applications in detail", noted Werner Vierling, managing director and company owner. "We are again expecting guests from across the globe, including countries such as Australia, Great Britain, Poland, Russia and the United States."

Quality assurance for DSL and IP-based services

For the Measurement Solutions Division, the focus of the Autumn Fair will be on quality assessment and assurance for broadband Internet access technology (DSL) and IP-based services such as voice over IP (VoIP) and Internet television (IPTV). "Speakers representing Deutsche Telekom, alternative carriers, consulting firms, infrastructure providers and various associations will report on topics relating to the market, technology and regulatory issues", added Werner Vierling. "In only five years, our Autumn Fair has established itself as a meeting place for German carriers and telecommunications suppliers to discuss new trends and keep in touch with their colleagues."

Electronics production and company anniversary celebration

Vierling Production is the Vierling Group's third division. On September 22, it will present services related to development and manufacture of high-quality electronics. Speakers from Vierling and various partner companies will report on modern production technologies, current projects and advanced techniques for quality assurance. Company tours will be available concurrently. Festivities will begin in the afternoon as guests from Germany and across the globe celebrate the company's 65th anniversary. Vierling was founded in 1941 by Prof. Dr. Oskar Vierling.

Registration and additional information
