Fifth installation of Orga Systems' fully convergent billing system OPSC Gold

Paderborn (Germany), 22 December 2009: Leading Asian mobile network operator chooses Orga Systems' convergent real-time rating, charging and billing system OPSC Gold. The system offers true prepaid/postpaid and service convergence, supporting mixed or hybrid payment methods. The unique combination of convergent real-time rating, charging and billing in one modular system provides the operator with many advantages for profitable and sustainable growth.

Reduction of CAPEX and OPEX due to the use of one single system

The network operator will be able to launch new services, products and related campaigns in a short time frame, while keeping operational expenditures for the comprehensive solution at a minimum. The unique charging, rating and balance management for all types of subscribers reduces fraud risk significantly. The enhanced flexibility to combine products and services for future marketing and promotion activities will increase revenues. Last but not least, the operator will achieve comprehensive reduction of CAPEX and OPEX due to using one single system instead of using two separate systems.

Real-time capabilities to optimize revenue management processes

The high performance rating functionalities of the OPSC Gold system enable the operator to provide complex, innovative tariff and price models in combination with flexible payment methods. Real-time capabilities ensure transparent cost-control, avoid leakage and optimize revenue management processes while subscribers benefit from accurate spending control and instant account information. OPSC Gold consolidates all services used by a subscriber or a group of subscribers – regardless of the payment method – and charges them in one single bill.

Orga Systems

As the pioneer of GSM prepaid billing, Orga Systems has gained highly qualified expertise in real-time charging and billing.

Orga Systems focuses on real-time based solutions for customer billing and administration in mobile telecommunication services and set important milestones for the industry regularly to further expanded its leading position.

Orga Systems' high-performance database, InCore® is currently the fastest data technology worldwide with regards to access speed.

Mobile operators need future-proof billing systems which offer clear service and cost benefits.

The fully convergent real-time billing platform OPSC Gold guarantees their profitable growth.
