

## Shuttle releases XPC Barebone SG41J1 with newly-designed J1-chassis

Date: 02-23-2010 10:18 AM CET

Category: [IT, New Media & Software](#)

Press release from: [Shuttle Computer Handels GmbH](#)

Further models of the J1-series to be launched soon

Shuttle Inc, a leading developer and manufacturer of multi-form-factor solutions such as the XPC Mini-PC Barebones, today announces the XPC Barebone SG41J1 in Europe. The first offspring of the J-series is the pioneer of different other Mini-PCs to be introduced in the upcoming weeks.

The chassis of the XPC Barebone SG41J1 is almost re-signed from scratch. Developed for most versatile use, the SG41J1 maintains the advantages of previous XPC models while incorporating many improvements. The J-series represents the next step in the evolution of Shuttle Mini-PCs that has begun in 2001.

For the first time models of the J-series also support the mini-ITX standard allowing for easy future upgrades. The cooling system includes linear controlled fans, large ventilation holes and improved airflow inside the chassis. As a result, even high-performance components such as a dual-slot graphics card, Intel Core 2 multi-core processors and up to 8GB of DDR2-memory can be fitted. Pre-routed cables facilitate the setup. There is also Kensington lock present at the back of the case for enhanced security. A completely new front design with a decently lit XPC logo makes the SG41J1 easily recognisable.

The XPC Barebone SG41J1 is based on Intel's G41 Express chipset and includes a DirectX 10 Intel GMA X4500 GPU with a DVI-port. It also sports an array of USB 2.0, PS/2, parallel and serial ports. One PCI-Express x16 slot and one 32bit PCI slot are available for further expansion. The system is powered by a 250 Watt power supply.

The SG41J1 is only one of varied new models that will be showcased at CeBIT 2010 in hall 17, stand G68.

The Shuttle XPC Barebone SG41J1 is available from specialist retailers immediately.

Established in 1983 in Taiwan, Shuttle Inc. specialises in the development and production of innovative Mini-PC solutions. The stock market listed company is represented globally through subsidiaries in Germany, the USA, Japan and China. Since 2001 the attractive cuboid PCs designed for virtually every application area have been the main focus of business for the head office operating out of Taipei. Confirmed by customers and the trade press alike, Shuttle stands out due to its effective management and its longstanding experience as a manufacturer of highquality motherboards. Shuttle Mini-PC Barebones and Complete Systems have for years been the first choice for many system integrators, VARs, OEMs and ODMs. With its new, mobile PC solutions Shuttle also meets the constantly changing demands of consumers.
