Press release from: [Shuttle Computer Handels GmbH](#)

With option of installation behind flat panel displays

Elmshorn, Germany, February 26th 2010. Shuttle Inc., a leading developer and manufacturer of multi-form-factor solutions such as the world-famous XPC Mini-PC-Barebones, will be unveiling at this year's CeBIT in Hanover a new, ultra-compact PC platform which, at just 3.3 cm wide, is already HD-compatible.

The Shuttle Barebone XS35 is a Mini-PC in the 1-litre class which, thanks to its shape and the standardised VESA mounting interface, can be easily fitted behind flat panel displays and therefore does not take up any space. Intel's Atom D510 Dual Core Processor (2x 1.66 GHz) and the NM10 Express Chipset serve as the energy-saving hardware platform. A high-performance NVIDIA GT218 (ION2) graphics card provides streaming 3D and video playback. The HDMI connector allows for excellent sound and picture quality and connects the device to modern flat panel displays and large televisions easily.

Other practical connectors include 5x USB, VGA, LAN and Audio. Housed in the small case are a multi-format card reader, a 2.5" hard disk and an optical slimline drive. For added security, it can also be protected against theft using a Kensington lock. The XS35 is passively cooled and therefore practically noiseless - ideal for home use, too.

This innovation will also be on display at this year's CeBIT. The Shuttle trade fair stand is located in Hall 17, Stand G68.

The new Shuttle Barebone XS35 will be available in stores in the second quarter of 2010. The recommended retail price has not yet been fixed.

Established in 1983 in Taiwan, Shuttle Inc. specialises in the development and production of innovative Mini-PC solutions. The stock market listed company is represented globally through subsidiaries in Germany, the USA, Japan and China. Since 2001 the attractive cuboid PCs designed for virtually every application area have been the main focus of business for the head office operating out of Taipei. Confirmed by customers and the trade press alike, Shuttle stands out due to its effective management and its longstanding experience as a manufacturer of highquality motherboards. Shuttle Mini-PC Barebones and Complete Systems have for years been the first choice for many system integrators, VARs, OEMs and ODMs. With its new, mobile PC solutions Shuttle also meets the constantly changing demands of consumers.
