

Largest domain information database on the Internet from DomainDB.com

Date: 03-16-2010 10:11 AM CET

Category: [IT, New Media & Software](#)

Press release from: [triop](#)

One of the major domain information databases on the Internet named DomainDB.com is currently running a domain information database online.

One of the major domain information databases on the Internet named DomainDB.com is currently running a domain information database online. It has some great features like commenting about any particular domain. Once detail information of a particular domain is found then there is a facility in DomainDB.com to put comments for that domain.

Definitely DomainDB.com will show the physical location of any web server even with the IP address as well. This is one of the greatest features that DomainDB.com is currently providing to their end user and the visitors. By adding some more features like getting information about any particular domain from Twitter is also available in this domain information database website. DomainDB.com will also show the visitor statistics for a domain in a graphical format. It is the largest domain information database on the Internet today which contains information about 87 million domains worldwide and has unique information such as the domain relations.

DomainDB.com is very much user friendly to the end user and very simple as far as it's web structure is concerned. DomainDB.com will accept domain name or url to process query for that domain and give results. More detail information such as the number of incoming links, number of pages listed at Google, Alexa popularity and Alexa backlink etc. for a domain are available too in DomainDB.com website. With the domain information it also shows the screenshot on it's webpage associated with the domain.

Currently DomainDB.com is running their Beta version of this latest and innovative web based technology. We can hope that soon it will be more popular to the user and they will launch their full version website in the market.
