Press release from: [Jerasoft Development](#)

Jerasoft Development is pleased to announce the upcoming support for Mobile number portability (MNP) in Billbery 3.0 VoIP billing system release. New MNP feature release will be presented on March 20th.

MNP is the great feature that allows the subscribers to retain their existing mobile phone number when they move from one access provider to another or from one cellular mobile technology to another within same access provider service area. Such options are very convenient for customers, but proved to be a real pain for provider companies. The difficulties lie in humongous routing tables, procession of which generate high loads, drastically lowering performance of routing and billing equipment. With new BillBery 3.0 VoIP billing solution, JeraSoft offers methods of management of Mobile Number Portability, which allow VoIP providers to release any MNP billing scenarios without losing their edge in provisioning of more common services.

Jerasoft Development is known as the developer and integrator of billing solutions of the highest level and quality. Company's Billbery 3.0 billing platform is feated with high performance, stability and proved itself to be one of the most reliable solutions, currently present on VoIP market. Billing system provides advanced features and increased number of VoIP retail services like call shop support and prepaid top-up cards, profit margins control, active calls monitoring, partitioning, quality and capacity control for dynamic routing.
