Press release from: [Monitis Inc.](#)

San Jose, CA – March 18, 2010 – Monitis, the leading provider of 100% Cloud-based network and systems monitoring solutions, today announced a major overhaul and upgrade of its user interface designed to make the world’s most innovative suite of monitoring tools even more user-friendly.

First-generation and second-generation internal and external monitoring systems have been notoriously complex and difficult to use. When it launched, Monitis’ third generation suite of monitoring tools fundamentally changed this dynamic. With its latest UI upgrade, the user experience has been made even simpler. The new changes include:

- A new internal monitoring wizard. The new wizard helps users get set-up faster with no complexity or hassle. The steps in the new wizard are now easier to follow and now enable simultaneous setup of multiple agents (bulk add) and of multiple test types (CPU, process, etc).
- New options in the toolbar. The toolbar now enables users to change the number of columns, enable/disable flash charts, and collapse/expand modules directly from dashboard’s toolbar. The Help section has also been revised.
- Improved visibility and access in the tab bar. The size of the tab bar has been increased, allowing users to see more tabs without scrolling. The tab carousel has also been improved, making it more convenient to scroll and switch between tabs.
- Significant performance enhancements for IE users.

Hovhannes Avoyan, Monitis’ Founder and CEO, commented, “We already had the easiest-to-use all-in-one monitoring suite on the market. With our most recent UI overhaul and upgrade, we’ve gone from strength to strength. As per usual, we’ve been relentless in our pursuit of ways to help IT managers and system administrators save time.”

### About Monitis All-in-One Monitoring Platform

Monitis is a 100% Cloud-based, comprehensive, yet flexible, IT monitoring solution that consolidates backend, application, and cloud monitoring in an all-in-one, central monitoring service. The platform is easily customizable and may be used for managing of all kinds of IT assets such as websites, servers, routers, switches, VoIP devices, DNS, databases, processes and any other IP devices. Monitis provides users with a comprehensive view of their system’s health and performance.

### About Monitis

Monitis believes that the Cloud is the biggest thing to happen in IT management since IT management. Having seen this vision early, Monitis is now the global leader in developing this market. It is the first affordable network and systems monitoring solution based 100% in the Cloud. More than 50,000 customers from small businesses to Fortune 500 companies to government agencies and educational institutions have chosen Monitis to reduce system downtime, improve the productivity of their IT staff, and reduce operational expenditures.

Monitis was founded in 2005 by a team of seasoned entrepreneurs and fed-up and worn-out developers who were tired of complaining about the limits of software-based tools, while inspired by the promise of the Cloud. Headquartered in San Jose, CA, Monitis is lead by a team of IT professionals with deep experience running enterprise-grade IT businesses, as well as starting and selling several IT start-ups. Using a global workforce, particularly its R&D team based in Yerevan, Armenia, Monitis is poised to move from strength to strength. At present, it has a loyal and enthusiastic user community of 50,000, and an average month-on-month revenue growth of over 10%.
