### Hazardous Areas and Harsh Environment Electrical Connection Specialist Launches Comprehensive Catalogue

Electrical safety pioneer, Hawke International, a specialist in electrical connection in harsh and Ex classified environments, has released a new 166 page catalogue. The company designs, manufactures and distributes cable glands, connectors and enclosures. These are used extensively by the global oil, gas and petrochemical processing industry and also in mining and industrial applications.

Covering the entire range of internationally certified products, the catalogue also has applications information and technical data to assist engineers and designers in selecting the most appropriate product for each situation. Available as a hard bound copy or a PDF download from the Hawke web site, the catalogue gives detailed guidance on technical standards together with product compliance data relevant to differing regional and national safety certification standards.

Phil O'Connor of Hawke explained, "Many customers know us for cable gland products and are sometimes unaware that we produce other equipment to ensure the electrical reliability and safety of critical processes in hazardous areas. The new catalogue will introduce them to the many other ways that we can solve problems of cable termination, power connection and

protection of electrical equipment from dust and explosive gasses in harsh conditions.”

Hawke products are distributed through a world-wide network of distributors supplying end users, prime contractors and module/system builders engaged on any project anywhere in the world.

More Information

For over 50 years, Hawke International, a member of the Hubbell Inc group of companies, has led innovation in the design and manufacture of cable glands, electrical connectors, enclosures and junction boxes for safe use in hazardous areas.

Products include ATEX approved cable glands for safe cable termination in explosive environments, electrical connectors for live connection and decoupling in hazardous areas, enclosures and junction boxes in GRP and stainless steel for extreme environments, and transformer breathers for humidity regulation in instrumentation cabinets. All products are tested and certified to relevant international standards for worldwide applications.
