Press release from: [RapidSolution Software AG](#)

Karlsruhe, 13th of December 2006. RapidSolution Software has published on the internet page www.tunebite.com the free demo version of the same named Windows Software with many new functions. Tunebite 4 ensures consumers that they can play DRM freed, rightfully purchased audio- and video files on every recorder.

Tunebite 4 boosts processing speed

RapidSolution Software supports since 2004 the mature consumer in his effort to achieve the right of playing legally purchased audio- and video files on any terminal device. In doing this, Tunebite records music, audio books and videos while they are being played by DRM accepted players and saves them as private copies. The previous version of Tunebite, internationally distinguished by professional magazines, could already remove for the consumer copy protection at high speeds. Now, Tunebite 4 can perform this operation with several copy protected audio files at the same time, thus multiplying operation speed. When a comparison test was performed on a 3.2 GHz PC with 10 WMA-music tracks of 4minutes length, the new Tunebite shortened the duration of the fully automated process from 12.5 minutes to 3 minutes.

Many new additional functions for the Premium and Platinum Editions

Tunebite 4 Premium is suited for the conversion of copy protected music files und audio books. Tunebite 4 Premium supports following copy protected formats: WMA, M4P, M4B and AA/AAC. Tunebite 4 Platinum additionally converts videos in copy protected WMV- and M4V- formats.

Tunebite 4 now disposes with the WAV format, besides MP3, WMA and OGG, of a new audio output format. ID3-tags, cover artwork, lyrics are added by a new search agent and can be also manually processed with the help of an editor. With the appended miniplayer music files can be played and the automatically searched for cover pictures and lyrics viewed.

Brand-new for every Tunebite Edition is the CD-burning function, which makes it possible to burn with only a few clicks the copied music on audio- and MP3-CDs for the car radio. Also new is the synchronization function. Apple iPod, MP3-Player, PDA and mobile phones can now be managed and receive the music tracks, audio books and videos for the run.

The diversity of functions for Tunebite 4 is completed by the ringtone generator for mobile phones, which produces new and free of charge ringtones in standard format out of the music files already freed of copy protection, thus keeping teenagers from giving away their money on subscriptions for ringtones. In time for the Microsoft Windows Vista release for the personal user a free of charge Tunebite update will be available for the consumer.

Tunebite 4 Platinum with the integrated 3vix MPEG-4 Encoder brings videos on your mobile devices

Many retailers advertise before Christmas time video compatible mobile devices and mobile phones of the newest generation. However, DRM protected videos cannot be played on these devices. RapidSolution Software brings especially to the user of mobile devices Tunebite 4 with audio and video functions such as the integrated 3vix-Encoder.

PCs with 2 GHz CPUs convert with Tunebite 4 Platinum copy protected videos at 176x144 and 320x240 resolution. More efficient PCs with 2.3 to 2.6 CPUs convert, depending on format at 480x360 and 640x480 resolution. PCs with an even higher performance, beginning with 3.2 GHz can automatically and legally convert with Tunebite 4 Platinum and the help of the 3vix-Encoder Videos in standard format WMV and M4V for mobile devices and also for the playback on the PC in M4P format even at DVD-resolution - 720x576.
