

## **LOGIBALL offers outdoor maps for Germany, Austria, Switzerland, South Tyrol and Majorca**

Date: 07-30-2010 04:37 PM CET

Category: [Tourism, Cars, Traffic](#)

Press release from: [LOGIBALL GmbH](#)

Outdoor activities are trendy. LOGIBALL has launched highly precise outdoor navigation maps for Germany, Austria, Switzerland as well as for the complete outdoor areas of South Tyrol and the Spanish island of Majorca. Good news for the navigation and cell phone industry as well as for application service providers and the tourism industry since the LOGIBALL outdoor navigation map contains by far more routable roads than conventional outdoor maps. For example, the Germany outdoor navigation map includes an extra million kilometers of the outdoor network (seamless database including all information) along with an optional 200,000 kilometers of long distance and regional bike routes. In order to bring the traveller to the desired route, the "standard street network" is of course incorporated into the map. It's this simple: select the desired route, calculate the route to the starting point and off you go! References on heights and upward gradients, rivers and water areas, in addition to locations of restaurants and hotels within the area provide for an effective orientation. The integration of individual content as well as further technical adjustments are also possible.

For many years, LOGIBALL has provided quality assurance of digital navigation maps for B2B clients. As one of the few independent players in the market, the German company for navigation maps and solutions is capable of integrating data of different formats into a navigation map. This enhanced data is ready to be compiled into every navigation equipment device.
