

Infima Archiver 2.0 new release - Very high compression ratio and speed

Date: 04.04.2008 - 12:28

Category: [IT, New Media & Software](#)

Press release from: [Infima Technologies](#)

Infima is a new high performance file archiving technology. Built from the ground up for better compression and security but not in the cost of performance, it provides the best platform for managing and creating file archives which are 10%-85% better than all existing products.

The main features for the new LAN format are:

1. Very high compression ratio and speed.
2. Added new modeling which enable very fast extraction of archive – 10x faster than compression time.
3. Recompression for already compressed files (suchlike: pdf, jpeg, gif, png etc) – lossless.
4. Strong AES-256 encryption.
5. Supporting files with sizes up to 16000000000 GB.
6. Unicode file names.
7. Support for right-click menu.
8. GUI file manager interface was removed.

Infima Ultimate Archiver is the best compression programs available today! The infima Family of products is designed to meet any level of compression needs; from basic expansion to advanced archive manipulation, to automating routine compression tasks, and even building compression into a software application.

Infima ultimate archiver makes using the Internet fast, safe, and secure. Whether you store data securely in space-saving archives or safely send it to friends and co-workers, infima Ultimate Archiver makes it easier than ever to backup, upload files, and more.

With our revolutionary new patent pending compression technology, infima Ultimate Archiver - archives what no other compression product has been able to do – reduce the size of images, audio and video's up to 80% with absolutely no loss of quality. infima Ultimate archiver patent-pending technology enables users to fit more data onto CDs, DVDs, and other storage and backup media.

About Infima Technologies LTD

infima Technologies was founded in early 2006 by seasoned entrepreneurs with a proven track record and experienced industry professionals from the field of mathematic and engineering with one mission in mind – to research and further develop state of the art compression technologies and bring world best compression solutions to market with widespread access.

infima Technologies is a user driven company which aims to revolutionize data compression technologies for users in a world of converging digital life. Our first product – Infima Ultimate Archiver - brings together over 8 years experience in the design, development and research of data compression technology. Infima innovative data compression software powers both revolutionary and reliable tool without compromising on functionality.
