

DELTA PRESENTS THE SOLIVIA SOLAR INVERTERS AT THE 25th EU PVSEC

Date: 08-31-2010 10:33 AM CET

Category: [Energy & Environment](#)

Press release from: [Delta Energy Systems \(Germany\) GmbH](#)

The year 2010 is the year of SOLIVIA, the new brand of Delta's Solar Inverters. SOLIVIA stands for "Solar inverters for versatile and intelligent applications".

Delta Energy Systems (Germany) GmbH presents its latest products at the 25th European Photovoltaic Solar Energy Conference and Exhibition in Valencia. From the 6th until 9th of September, trade show visitors have the possibility to learn more about the wide product range of string and central inverters.

The third generation of products – designed for applications in Europe – is comprised of inverters with transformers and a nominal output power between two and five kilowatts, two transformerless models with a nominal output power of 15 and 20 kilowatts as well as the central inverter product line with three central inverters with an output power between 77 and 100 kilowatts. A key benefit of all inverters is the integrated country-specific software which minimizes warehousing and logistics costs. One unit can be used in more than eight European countries simply by the click of a button.

SOLIVIA CM – More Flexibility due to a new Protection Class

The central inverter product line from Delta is comprised of three models – SOLIVIA CM 77, CM 88 and CM 100 with a nominal output power of 77, 88 and 100 kilowatts. Compared to the commercially available central inverters, the SOLIVIA CM series are smaller and therefore more lightweight, so that they can be easily installed in places with less utility space. Furthermore, the models are convincing due to a new feature: beginning in September the central inverters will be equipped

with protection class IP54 instead of the current protection class IP20. This makes it possible to install the inverters in protected outside areas, increasing comfort for the operators and decreasing costs.

Visit Delta at the 25th European Photovoltaic Solar Energy Conference and Exhibition in Valencia on Level 3, Hall 2, Booth A26.

About Delta

Delta Electronics Group

Delta Group is the world's largest provider of switching power supplies and brushless fans, as well as a major source for power management solutions, components, visual displays, industrial automation, networking products, and renewable energy solutions.

Delta has grown by 18% annually since 1994. More than 60,000 people work for Delta all over the world in sales, development and production.

Delta Energy Systems (DES)

Delta Energy Systems empowers Telecommunication, Information Technology, Industrial Automation and Medical Applications with reliable and innovative solutions tailored to customers' needs. At Delta Energy Systems we act quickly, initiate future trends and fully understand our customers' needs and future requirements.
