Press release from: [Schaltbau GmbH](#)

Munich, 31 August 2010: The new LV 500 Series charging connector assures high reliability and operating safety in the long run. Therefore it is ideally suited for use in industrial trucks, lifting devices and battery chargers. It also meets the behaviour of the contemporary user: Modern fast chargers recharge vehicle batteries in short time or traditionally over night. For more information visit www.schaltbau-gmbh.com.

Delivering maximum performance and working in harsh environmental conditions requires reliable, durable and safe products. The new LV500 Series charging connector meets these requirements. High-quality, screw-machine contacts allow for currents up to 500 ampere. Owing to its form stable, glass fibre reinforced shells, the connector is resistant against mechanical stress, shock and vibration, acids as well as the extremes of temperature. The connector series meets the requirements of UL 1977.

“Connect – Contact – Control”, is the motto under which Schaltbau GmbH develops and manufactures electromechanical components for railway equipment and industrial applications. Founded in 1929, the company has nine locations of its own and more than 50 sales partners worldwide. Subsidiaries in France, England, the USA, China, India and other countries emphasise the company’s international orientation. The product portfolio includes connectors, snap-action switches, contactors, and command and messaging devices. The company carries out development both for specific orders and for series production. Its products are distinguished by their high quality, great reliability and long lifetime. The Schaltbau GmbH quality management system is certified according to DIN EN ISO 9001, and its ecological management system according to DIN EN ISO 14001. Since 2004 the company has been certified as a Q1 Supplier for the Deutsche Bahn (German state railways). In October 2008, the Velden and Aldersbach plants were quality-certified according to IRIS (International Railway Industry Standard).
