

LEM Wind Identification Products Mark for Safety and Security in an Emerging Energy Industry

Date: 09-01-2010 02:53 PM CET

Category: [Energy & Environment](#)

Press release from: [LEM Products, Inc.](#)

LEM Products, Inc. will be an exhibitor at the AWEA North American Offshore Wind 2010 Conference & Expo in Atlantic City on October 5-7.

LEM Products has long been a supplier of safety and identification products to Utilities and Energy companies from coal to natural gas to nuclear power. Wind Energy marks the most recent expansion for LEM in the renewable energy industry.

All energy producing facilities, regardless of the power source, create workplace environments that contain potential dangers to the workforce. These situations require proper identification, warning and clearly worded direction to maintain workplace safety and security.

LEM's expertise in materials and adhesives enables the creation of a range of products to identify all aspects of power generation and transmission. This translates into the production of faceplates, voltage markers, lockout tags, safety labels and more for the interior of a wind turbine. Equally important are safety and security warnings for the exterior such as No Trespassing, Authorized Personnel Only and Owner Identification signs. For transformer and substations LEM has a multitude of electrical safety products including voltage markers, arc flash and transformer labels.

LEM manufactures many products for use in harsh environments, under extreme temperature ranges, with adhesion to varied surface materials and textures, and with UV and moisture resistance.

From traditional energy sources to renewable, LEM Products, Inc. has the product to provide the appropriate information or warning to ensure workplace safety, compliance, identity and security.

Visit us at the Atlantic City Convention Center, Booth 507, October 5-7, 2010 and see LEM's durable products and their multitude of applications. LEM is a member of the American Wind Energy Association (AWEA).

LEM Products Inc. is an industry leader in the manufacture of identification products that protect people by identifying potential hazards, provide instructional and facility/site safety information. Precision manufacturing, a dedication to customer satisfaction and a commitment to achieving corporate targets for growth and social investment set LEM apart in the industry.

LEM Products Inc. is a WBENC certified company with the reputation as a leading safety identification supplier in North America and beyond. LEM Products Inc. is certified by the California Public Utilities Commission and the Pennsylvania Department of General Services. Business placed with LEM Products Inc. qualifies for Federal and State Diversity Spend initiatives.

For over 43 years LEM Products Inc. has been providing wire marking, pipe marking, safety signage, lockout tags and other products to utilities, corporations, and manufacturers to mark facilities and products for OSHA/ANSI compliance and safety. Maureen O'Connor, CEO, has received numerous awards for her leadership, her commitment to diversity in the workplace and community involvement.

LEM Products, Inc. has been providing compliant and responsible industrial identification products for over 43 years. LEM has built a solid reputation, across industries as a dependable supplier of industrial products ranging from safety labels and safety signs to lockout tagout to custom tags and more.
