Press release from: [ROTRONIC AG](#)

Bassersdorf, 3th September 2010 - The measurement of water activity plays a decisive part in the quality inspection of humidity-sensitive products. The free water in a product influences its microbiological, chemical and enzymatic stability, and has a significant influence on the shelf life of the product. Rotronic offers a cased set for all those who are interested in guaranteed precise measurement of water activity.

The case contains a HygroPalm23, which Rotronic has developed specifically as a portable solution for the measurement of water activity. The measuring unit has 2 exchangeable probe inputs, provides all psychrometric calculations, and can be connected to a PC via mini-USB interface.

The case includes all the accessories needed to allow users to calibrate their measuring unit quickly and easily by themselves. The contents comprise 1 HygroPalm23, 1 calibration device, 1 extension, 1 calibration solution and 1 climatic probe. The set is suitable for all areas of application in which water activity is measured, and is an ideal companion in the manufacture of cheese and meat and in the pharmaceutical industry, but also for spot checks in the production of animal feeds, paper, bakery goods and tobacco.

For more detailed information on the HygroPalm23 Set and anything else about humidity and temperature measurement, visit humidity@rotronic.ch or call +41 44 838 11 44.

ROTRONIC - Your competent partner for all matters relating to all aspects of humidity and temperature measurement.

For 40 years, ROTRONIC has been combining technical innovation with Swiss quality.

The new HygroClip 2, with its integrated AirChip 3000, is setting new standards in terms of accuracy, operating range and OEM flexibility.

ROTRONIC sells their products worldwide in 40 countries and has branches in the USA, Germany, Great Britain, France, Taiwan, Singapore and China.
