Press release from: [ThatPRGuy](#)

Low-cost has always been the biggest attraction for use of voice over IP, or broadband phone service. The Low-price leader beats the cost of Vonage at less than \$7 per month.

Wakefield, NH -- VoIP, broadband voice over IP phone service, was once a novelty but is now coming into its own as a significant cost savings over traditional phone service.

There are now many companies offering VoIP services, and each one has a variety of calling plans and equipment to choose from. It is difficult, and time consuming, to compare one company to another. That process is now easier thanks to a free web site that provides all the information in one place to figure out which company works best for any given situation.

Some charge for phones, and some do not. Some charge start-up fees and some do not. Some offer monthly prices of under \$7 a month. All of them have a whole host of bells and whistles to make communications easier. There are personal plans, family plans, and various business plans. Sorting it all out can be very challenging. Help can be found at www.FreedomInternetPhoneService.com where the plans of five top companies can be compared side by side.

The site provides detailed information about the top VoIP service providers so consumers can easily shop and compare. If they find what they like they can sign up easily in just a few minutes online and have their new VoIP service installed and working instantly.

There is no one VoIP company that is perfect for all customers. There are so many different plans, features, monthly costs, and other factors that must be taken into consideration. The site enables consumers to look at each plan side by side to determine which one is right for any particular situation.

Voice over Internet protocol (VoIP) is a service that uses a high speed Internet connection to make phone calls using a regular telephone. The computer does not have to be turned on, and calls are made and received just like traditional calls.

There are major advantages over regular phone service, such as having virtual phone numbers in other states and cities. The biggest advantage is the extremely low, flat rate cost. A VoIP phone line that enables both incoming and outgoing calls can be as little as \$7 a month.

Just because the monthly cost is low does not mean that company is the right one to use. It pays to check out all the features, start-up costs, free phones, video phones, and other benefits before deciding which company is right. FreedomInternetPhoneService.com is an excellent resource to help in the evaluation process.

About Freedom Internet Phone Service:

Consumers and businesses can compare many different VoIP service providers and the calling plans they offer at www.FreedomInternetPhoneService.com. Once a plan is selected it takes only a few minutes to sign up for a plan at the site.
