Press release from: [Zyto Corp.](#)

Orem, Utah – Dr. Jeff Wheelwright, DC, will deliver a presentation to hundreds of healthcare professionals at a free conference offered by Zyto Corp., a biotechnology company (OTC - ZYTC.pk)..

Wheelwright's presentation, "Understanding the Basics of Five Element Theory - the Systemic Approach," will be a support to the other presentations from other authorities, according to Dr. Vaughn Cook, event organizer and president of Zyto Corp.

"The Five Element Theory of health is based on the principles of movement and cycles. The ancient Chinese observed that all things, without exception, are constantly in motion. This constant movement is expressed in cycles which identify phenomena in both the natural world and our physical bodies. The association of these cycles to the Five Elements is strictly symbolic, a means for the ancient healers to make sense out of what they observed," explained Wheelwright.

Wheelwright maintains a chiropractic practice in Morgan, Utah, and he is also a health consultant to Systemic Formulas. His work with Systemic Formulas has allowed him to help other health care practitioners initiate the use of nutrition in their clinics. It has also exposed him to many successful practitioners from around the country who utilize a myriad of different nutritional testing techniques.

Wheelwright is sought after for presentations on many subjects, including parasites, musculoskeletal issues, Five Element Theory and practice, kinesiology, and others.

The conference will feature presentations from many more highly qualified authorities. Complete details of the presentations can be found online at www.Zyto.com

"Let the Evolution Begin" is the theme for conference to be held on May 3, 4, and 5 at the Zermatt Resort and Spa. The Zermatt is a picturesque destination with year-round recreation, including 90 holes of PGA championship golf at three locations, three reservoirs for all types of water sports, blue-ribbon fly fishing, rafting, and hundreds of miles of trails for mountain biking, horseback riding and hiking.

By accessing data at a subconscious level, health practitioners using ZYTO technology are able to use the ZYTO system as an aid to make better-informed diagnostic and therapeutic decisions. Even though this process has clinical value, instruments using the ZYTO technology are not medical devices. They can more accurately be compared with a printed health questionnaire and the pen the patient uses to fill in the blanks.

ZYTO Corp. was founded by Dr. Vaughn Cook, OMD. The company provides computerized bio-technology equipment and software that facilitates obtaining information from the human body to assist healthcare practitioners in making better decisions.
