Press release from: [WiFiMobile](#)

London, UK 3rd May 2007 - Mobile VOIP provider WiFiMobile have announced the release of their latest software Version 751 which provides complete support for the Nokia flagship handset, the Nokia N95.

With the much awaited Nokia N95 device now widely available on the market, users will be able to make VOIP calls either over Wi-Fi or through a 3G network. WiFiMobile's OneFone software is fully supported on any Nokia N95, whether it be unlocked or network branded due to the inclusion of a full SIP stack in the application. In addition the software provides presence information in the form of a buddy list.

The Nokia N95 and indeed other select Nokia S60 devices can also be used as an extension to a corporate IP PBX system. This allows IT/Telecom Managers to carefully control their company's continuously escalating mobile phone costs. IT Managers can re-program VOIP parameters for all of their employee's mobiles at the touch of a button.

CEO and Telecoms expert Gerry O'Prey says "This is good news for customers of all mobile network operators. Mobile VOIP is rapidly becoming a must have feature in top end cellular phones."

About WiFiMobile

WiFiMobile was formed in 2002 in Santa Monica, California and has recently opened a European office in the UK. Founder and CEO Gerry O'Prey was instrumental in the nineties by helping to liberalise the European land line telecoms market. Since then his main focus has been developing software for Nokia S60 smartphones to facilitate calls over a WLAN network and over 3G networks. The company is poised to achieve phenomenal growth in the next year as a pioneer in the rapidly evolving mobile VOIP market.
