Press release from: [medicalpicture gmbh](#)

Agency: **medicalpicture**

How simple life could be if everyone spoke the same language. Since the tower of Babel humanity attempted to, once again, communicate in one tongue and overcome the general difficulties associated with language barriers – with little success. The most recent attempt in this direction is the World Health Organisation's (WHO) attempt to introduce a common International Classification of Diseases, the ICD-10 code. This classification system allows the definition and communication of any given diagnosis independent of language.

Being the first internet image database to understand the power of this revolutionary tool, we developed the medicalpicture® ICD-10 search system, allowing our customers to search our databank using these diagnosis keys instead of search words, resulting in a vastly superior specificity in your search.

Search and enjoy

“This innovation simplifies navigating the medicalpicture® database tremendously,”

explains CEO Thomas Schmidt, referring to this latest addition to the medicalpicture search engine.

“We are certain that this innovation was worth the effort. Customers from around the world will finally be able to find exactly what they are looking for without the hassle of consulting a medical dictionary.”

Though using ICD-10 classification is a bit of a science itself, once familiar with the classification and the proper way to apply it to our search engine, navigating our database to the appropriate set of images becomes easier than ever. The greatest contribution to limitless communication in the scientific and medical field is however, still made by our images since as we know, “A picture says more than a thousand words.”
