Press release from: [Qulix Systems](#)

Agency: **Qulix Systems, BelHard group**

Belarus, Minsk, July 10, 2007- Qulix Systems will be taking part in an international “Modern Java Technology Tendencies” conference , scheduled for July 12, 2007, Minsk launched by High Technology Park (Belarus) and Exadel company. More that 300 belarusian and foreign IT professionals will be taking part in it. The main figures are– Gavin King (Australia), founder of a popular open-source Hibernate ORM and Max Anderson (Denmark), JBoss leading programmer.

The conference program was designed with the intention to discuss newly emerged opportunities of Java technology usage where Hibernate, JSF and Seam are the newcomers.

The main points of the conference are new opportunities of Java, new tendencies of its development and usage. Discussions and conversations with top IT professionals from Hibernate», «JSF», «Seam», «RichFaces», «Ajax4JSF», «Red Hat Developer Studio» on Q & A on this topic are going to be the hottest moments of the conference.

“There were lots of discussions about the necessity of new web applications despite the presence of JSP, Struts, Tapestry and others. There is a simple answer here – such applications demand monotonous and boring work of program developers which has nothing to in common with writing a code for business solution. Besides there are no IDE for the overwhelming majority of frameworks which are usually make the coding easier. That is why Hibernate, JSF, Seam are making lives of our developers easier and their work more productive. New source of information in this field is another fresh breath in Java and in our company developers’ success and knowledge database”, - Alexey Makarov, CEO, Qulix Systems, mentioned.
