Press release from: [BowBridge Software](#)

SAP-Content-Security experts BowBridge Software extend support to HP's enterprise UNIX.

Walldorf, July 26th, 2007 - BowBridge Software, Walldorf, Germany based SAP Content Security manufacturer announces the immediate availability of the successful „AntiVirus Bridge“ family of products on HP-UX 11i.

SAP customers worldwide appreciate the high performance and stability of HP-UX based servers and deploy mission critical ERP-solutions on this platform.

With SAP systems being implemented as Web portals, granting access to SAP applications over the Internet, the risk of storing virus-infected files inside the SAP database increases. Standard virus protection solutions cannot effectively secure uploads and downloads to and from SAP servers, potentially risking to infect internal or external users with files stored in the SAP database.

Even government authorities, such as the German Federal Office for Information Security (BSI) explicitly recommend to implement dedicated virus protection in SAP portal scenarios.

The SAP-certified AntiVirus Bridge technology allows easy integration of existing virus protection infrastructure to also secure SAP applications in ABAP in Java. Being able to leverage standard anti-virus products to protect data from within the SAP application-layer is unique to BowBridge. Thus content security products from leading vendors, such as Aladdin, Kaspersky Labs, McAfee, Secure Computing, Symantec and Trend Micro can be seamlessly integrated. Maximum flexibility, performance and cost-efficiency are the result of this open architecture.

"By further expanding our coverage of enterprise UNIXes to include HP-UX, BowBridge brings SAP content security to more platforms than any other vendor. Our customers benefit from this by being able to freely choose their platform and anti-virus vendor", says Andrea Simon, Sales and Marketing Manager at Bowbridge

About BowBridge Software:

BowBridge Software Limited, with headquarters in Walldorf/Germany, develops and markets security integration solutions for business-critical data, applications and systems.

BowBridge's technologies and products maximize customers' benefits of existing security infrastructures and add new critical elements to their security landscape.

BowBridge products are available worldwide through authorized resellers and system integrators.
