

Entensys releases UserGate 4.2 with Dual Antivirus Engines built-in

Date: 04.04.2008 - 12:28

Category: [IT, New Media & Software](#)

Press release from: [Entensys Corporation](#)

Entensys announced that its new version 4.2 of UserGate Proxy and Internet Security Server now includes both Panda and Kaspersky antivirus engines.

UserGate provides complete gateway traffic control that now includes double antivirus protection. Both the Panda and Kaspersky antivirus engines are fully integrated into UserGate Proxy so they work together as a double layer intercepting all the data transferred through the various Internet protocols.

UserGate 4.2 with Dual Antivirus Engines is available for immediate downloading from www.entensys.com. UserGate fully integrates a multifunctional complex of features with an extremely high level of security for protected Internet access packaged with easy-to-use administration tools that make it easy to install, deploy and manage.

Updates to the antivirus database can be fetched either automatically or manually from the Entensys website.

Panda and Kaspersky together form a synergistic combination of specialized, layered anti-malware with complementary protection strategies and unique processes. Kaspersky Labs' proprietary technologies enable Kaspersky Antivirus to have the industry's fastest response time.

"We are very happy to be able to expand our proxy server capability and improve our already respected antivirus protection", says Alexander Levchenko, President of Entensys Corporation. "The combination of two powerful antivirus engines with UserGate Internet Security server provides users with an extremely high-performance software solution for protecting their e-mail and Internet connections."

Additionally, the performance of UserGate was greatly increased even when using a massive list of restricting filters. UserGate 4.2 even lets you manage traffic speeds by means of NAT drivers and filter IP addresses through NAT.

This new version includes a number of bugs fixed, such as UDP port mapping performance, Fire Fox operating with FTP usage over HTTP, statistic mode improvements, and many others.

About Entensys

Entensys (www.entensys.com) is an international company with offices in the USA, Germany, and Russia.

Entensys Corporation is involved both in the development of new technologies and in acquiring of existing technologies with the purpose of extending them.
