Category: [IT, New Media & Software](#)

Press release from: [Tuner Tools, llc](#)

Agency: **Offsite Resources, LLC**

XD-16 / Predator Combo

Tuner Tools, llc is pleased to announce that Innovate Motorsports has released a new plug-in for Logworks automotive tuning software which will incorporate Diablosport Predator OBD/CAN Data into Logworks for analysis with O2 Wideband Air Fuel Ratio Data.

This plug-in provides tuners and mechanics the ability to data log automotive information from both the Automotive OBD system via the Predator Tuner as well as non-OBD wideband O2 sensors, oil temperature, pressure, accelerometer and other information collected through the Innovate Motorsports Modular Tuning System components.

The ability to use data from the Predator together with real time Air Fuel Ratio monitoring means a mechanic can now reprogram the car with custom fuel maps and timing tables and immediately monitor real results from the AFR meter or Lambda cable in real time and using the same set of components.

Previously released plug-ins for Logworks have a set up for use with the Tactrix OpenPort cables for Mitsubishi Evo and Subaru WRX models as well as a plug-in to use Logworks with the Megasquirt ECU system.

This new Diablosport Predator plug-in will make the use of Logorks & OBD data available to a wide range of popular American made cars and trucks.
