Press release from: [Lingobit Technologies](#)

New Lingobit Localizer introduces groundbreaking enhancements to accelerate software localization.

New York – August 28, 2007: Lingobit Technologies today announces the latest version of its software localization tool for Windows, Lingobit Localizer 5.2. The new version will help developers to collaborate with translators easier and faster.

"Lingobit Localizer 5.2 makes software localization easier," says Michael Trent, marketing manager at Lingobit Technologies. "The new version works faster than earlier releases. In some cases, it runs 2-6 times quicker than before, which will obviously appeal to our customers. Besides, Lingobit Localizer 5.2 eliminates the hassle of sending large project files to translators by email, because the project file now is about five times smaller than before."

Other important features in Lingobit Localizer 5.2 include an opportunity to localize .NET Compact Framework and .NET Framework 64-bit applications, localization of Message Tables resources (RT_MESSAGETABLE), support for strong named signed assemblies.

Lingobit Technologies also strengthens its commitment to Windows CE localization by introducing many enhancements for it. For example, the latest version has an improved dialog editor and can localize strings that contain empty symbols (").

These and the other features included in Lingobit Localizer help developers to simplify the complex process of software localization and enter new markets quicker.

Lingobit Localizer at a glance

Lingobit Localizer is a one-stop software localization tool that offers a unified interface and productivity tools to streamline workflow throughout the entire software localization process. Its arsenal of productivity technologies includes automated quality assurance, validation expert, and translation memory that ensure rapid and successful localization. Translation can be done within a company or delegated to a translation agency via a self-extracting package, containing a special edition of Localizer for translators and a project file.

Pricing and Availability

Lingobit Localizer 5.2 runs under Microsoft Windows 2000, XP, 2003, Vista and supports Visual C /MFC, .NET, Delphi and Java. Its Enterprise Edition costs \$1195 (US) or €995 (EUR). A Professional Edition for small and mid-size projects costs \$895 (US) or €745 (EUR). Buyers of both editions get a one-year maintenance that includes access to all new product releases and upgrades free of charge for 12 months from the date of purchase. More information on the product, as well as a free, 90-day evaluation copy of Lingobit Localizer is available from www.lingobit.com.
