Press release from: [DigiApp](#)

ISV, DigiApp.com: Now home PC users can easily listen to internet radio and record alternative or mainstream radio stations to mp3 files in superb quality. Finally it's easy to legally get new songs or jokes or podcasts in mp3 or iPod.

The web is buzzing – with thousands of radio stations. DigiApp partners with CoolMediaSoft to offer high quality mp3 radio stations recording software for the normal PC users that loves music and podcasts. Irrespective of whether you just like typical mainstream music – Pop, Rock, Country or Classical music or if you like specialized talk shows or alternative music styles, you can tune into an internet stations that features just what you like! “Cool Radio Recorder” is a nice piece of software that allows you to listen, record and schedule recordings directly into MP3 in full quality without any additional software.

“So you thought radio was just soft music for playing in the car? - There is so much else out there! Alternative music, specialized talk shows, broadcast about virtually any topic you can dream off by the people that set the stage for tomorrow. Cool Radio Recorder was made to offer 100% quality recordings for people that want to capture these special events or this hard to get music and insights”, says the Product Manager from CoolMediaSoft.

Cool Radio Recorder 2.1 is compatible with Windows 2000, XP, 2003 and Windows Vista! Free download can be found here: www.CoolRadioRecorder.com

Take your favorite radio to your mobile, mp3 player or iPod or store the coolest songs on your computer and be the best DJ ever at the next party! Record rare music and talks from underground or alternative stations or just tune into your favorite internet radio and listen – CoolRadioRecorder makes it all so easy.

“Modern computer users expect applications of superior quality that gets the job done. Partnering with CoolMediaSoft allow us to offer the easy to use CoolRadioRecorder at a very attractive price. Additionally we get to share knowledge about streaming technologies that was perfected to capture music in full quality – something that most other recording applications are not able to do”, says the DigiApp CTO.

“Imagine you want to listen to a special broadcast about your favorite topic, but perhaps it's transmitted from a different time zone at a time that is not convenient. CoolRadioRecorder offers full scheduling capabilities so you can plan the recording to be

made automatically. Select the station, Click Schedule and set the time and date and duration. You can even have CoolRadioRecorder wakeup your PC from hibernation, make the recording and put the PC back to sleep or shut it down. This way you will help saving energy and keep your bill down. That's just one of the many cool features you get", says the Product Manager from CoolMediaSoft.
