Press release from: [Syncro Soft Ltd.](#)

Syncro Soft Ltd, the producer of Oxygen XML Editor, has announced the immediate availability of version 9.0 of its XML Editor, Schema Editor and XSLT/XQuery Debugger.

The main feature of version 9.0 is a CSS-based visual XML editor allowing WYSIWYG like editing of XML documents. With an innovative approach to XML authoring Oxygen allows you to work with XML frameworks (DocBook, DITA, TEI, XHTML, etc) easier than ever before. Version 9 adds a new concept called Document Type that allow users to provide ready to use support for a framework or an XML language and share that with other users. This version also brings improved error reporting for validation against Relax NG schemas and Schematron, additional side view helpers, some component updates and a number of other features.

New in version 9.0:

The WYSIWYG like rendering of the visual XML editor is driven by CSS stylesheets conforming with the W3C CSS 2.1 specification so that users are not locked into a custom format. Some enhancements introduced by the W3C CSS 3 working draft like CSS XML namespaces and the attr function are also supported. The tagless editor comes with ready to use support for largely used XML frameworks: DITA, DocBook 4 / DocBook 5, TEI P4 / TEI P5 and XHTML. Both the CALS and HTML table models are supported.

The new Document Type concept allows to easily share between users preconfigured support for an XML framework or language consisting of default schema for validation, CSS stylesheets for WYSIWYG editing, custom actions, document templates, XML catalogs and transformation scenarios.

Incomplete error reports in validation against a Relax NG schemas like "required attributes missing", "required elements missing" or "unfinished element" were updated to report exactly what XML attributes or elements are missing and what is expected to finish the element. The diagnostics messages issued by a Schematron schema are displayed together with the other validation errors. Schematron report messages are treated as warnings.

The new outliner implementations for CSS and XQuery allow you to see immediately the structure of your CSS and XQuery documents. Two new views, the XML Elements View and the Entities View allow to easily insert new elements and entities in your XML files.

There were many small but useful new features in Oxygen XML editor version 9, to take an example the spell checking is aware of xml:lang values and this allows to check the spelling in documents that contain content in more than one language.
