

Free GPS navigation for the cell phone

Date: 11-08-2007 02:30 PM CET

Category: [Media & Telecommunications](#)

Press release from: [Zelfi AG](#)

To follow the right direction most people have already used a route-finder in their car. So it comes in useful when the navigation system is integrated in the cell phone. And it is a great advantage when the software is offered for free, too.

This mobile software is called amAze, a mobile mapping, local search and navigation solution. It contains a wide coverage of maps including aerial photo in Europe, North America, Australia and parts of Asia and Africa. The location along the route is indicated with vocal and graphical guidance in the shortest possible way by Bluetooth connection with a GPS receiver.

The software contains several further features. Any location can be searched by its address. Companies listed in local search directories can also be searched and navigated. The view and use of dynamic high quality maps at various scales is offered and naturally there is calculated the fastest way between two locations. Additionally it provides a great comfort to save and manage the personal favourites.

A mobile phone with bluetooth function, a gps mouse and an advantageously data rate is necessary to use the powerful navigation. The mobile software amAze is available at www.zelfi.com/en/mobile-navigation/ and can be downloaded straight on the phone at zelfi.mobi/en/nav/.
