

DYNAMIC SYSTEMS is a new abas customer

Date: 11-08-2007 02:37 PM CET

Category: [IT, New Media & Software](#)

Press release from: [ABAS Software AG](#)

Karlsruhe, 08.11.2007 – In the future, the DYNAMIC SYSTEMS GmbH, located in Wessling near Munich, will work with the ERP solution, abas Trade. Important criteria which went in favor of the abas Business Software were, amongst others, the flexibility, the user-friendliness and the good price/performance ratio.

Trade solution abas Trade convinces DYNAMIC SYSTEMS

A new ERP software for DYNAMIC SYSTEMS was necessary as the enterprise resource planning software which had been used up to then had been discontinued and the required solution with financial accounting, EDI and CRM could not be realized.

„A selection process using the Internet platform Trovarit, and based on detailed specifications, selected four providers out of over 100 to make a presentation for the final selection. ABAS was not only convincing because of extensive functionality, but also showed professionalism and competence alongside the implementation partner Koldt. Important criteria were also the flexible adjustability, easy operation, a good cost/use ratio and less support effort. With these criteria ABAS managed to also compete with those who made it into the final selection,“ summed up Dr. Harald Lossau, CEO of DYNAMIC SYSTEMS.

DYNAMIC SYSTEMS GmbH

The DYNAMIC SYSTEMS GmbH, with headquarters in Wessling near Munich, has since the establishment in 1993 focused on industrial coding and specialized in the development of full service conception, including many logistic solutions. The company is certified under ISO 9001:2000. DYNAMIC SYSTEMS is now a competent partner concerning all queries about industrial coding and also security coding. As a manufacturer and distribution company, the company provides integrated and system-spanning concepts from one source – from individual components to individual complete solutions for automated coding.

The DYNAMIC SYSTEMS service portfolio includes:

- Consultation and planning
- Selection and customer-specific provision of identification media: labels, transponders, barcodes, 2D codes
- Identification systems: printers, scanners, RFID
- Quality assurance and releases
- RFID complete solutions
- Programming
- system integration
- Print center: customer-specific printing, also with consecutive coding
- Service: maintenance, repair, training, consultation.
