

## **RFID for Data Center IT Asset Management Webinar From Industrial Portals, Zebra Technologies and epcSolutions**

Date: 11-27-2007 02:22 PM CET

Category: [IT, New Media & Software](#)

Press release from: [epcSolutions](#)

Webinar scheduled for December 11th at 1:00 PM ET.

Great Falls, VA – epcSolutions invites you to a webinar on asset management within data centers with premier partners Zebra Technologies and Industrial Portals on December 11th at 1:00 PM ET. Our speakers are Christine Rosasco, RFID Business Development Mgr for Zebra Technologies, Tim Buckley, RFID Manager for Industrial Portals and Chuck Williams, CTO for epcSolutions.

In many companies today, tracking assets is an important concern regardless of size. Fixed assets are defined as any 'permanent' object that a business uses internally including but not limited to computers, tools, software, and server equipment. While employees may utilize a specific tool or tools, the asset ultimately belongs to the company and must be returned. Therefore without an accurate method of keeping track of these assets it would be very easy for a company to lose control of them. Asset tracking software and solutions allow companies to track what assets it owns, where each is located, who has it, when it was checked out, when it is due for return, when it is scheduled for maintenance, and the cost and depreciation of each asset. The benefits of tracking IT assets include the ability to reduce shrinkage and lost assets, improve security for critical assets, increase capital expenditure process and increase productivity.

Zebra Technologies printers can print and encode asset tags of all sizes for different pieces of equipment. Zebra has printers and label materials with the right sizes, durability, graphics, and information encoding options to support any check-in/check-out application.

The Jamison Portal is designed to capture IT assets with RFID tags in a data center and provide the greatest return on your RFID investment. By only requiring one reader per unit, Jamison's Industrial Portals™ includes customizable antenna configurations, all antenna cabling, and quick and easy portal assembly and installation.

FixedAssetManager™ from epcSolutions assists in the day to day tracking of assets within a data center. In a data center it will encode and read tags for any IT asset including servers, switches, racks and storage devices, tracks IT assets as they are moved in and out of the data center, associates IT assets to their specific rack locations and allows for rapid inventory of IT assets based on location.

We invite you to join us and to hear about solutions for tracking fixed assets.
