Press release from: [WiFiMobile](#)

Los Angeles California December 13th 2007 - Leading mobile VoIP provider WiFiMobile today announced that their VoIP service has changed to prepay with very competitive costs.

The company had previously charged a monthly subscription which allowed free calls to landlines in certain countries, however calls to all other worldwide destinations were barred. The introduction of a top up system now presents a global platform.

WiFiMobile's new tariff rate has been completely revised and users can now take advantage of calls such as to India at under 10 US cents per minute. Calls to other online WiFiMobile customers are free regardless of location.

Their unique local access numbers remain in place where cheap calls can be made when no Wi-Fi access point is in range. These numbers are available in twelve countries at present with more to follow shortly. Customers can also register other numbers such as their home landline to utilise these access numbers. This combines Internet and dial through calling into just one account.

The service is available at the company's website where their VoIP client oneFone can be downloaded instantly to any compatible Nokia E or N Series smartphone. A free \$1 credit is applied to all new accounts to test the technology. Customers are also able to securely access the log in portal to view account balance, top up history and real time CDRs.

The company's VoIP client oneFone fully supports Presence enabling users to see who is online at any time with other business features such as Call Conferencing, Call Transfer and VCC (Voice Call Continuity) coming soon.

WiFiMobile CEO says "This stretches out our potential market to places that we couldn't touch previously. Countries such as India have over 200 million mobile users and have a huge overseas based population. Our rates are very competitive and we have the most robust VoIP client".
