

## RFID-Enabled Document Tracking System Webinar

Date: 04.04.2008 - 12:28

Category: [IT, New Media & Software](#)

Press release from: [epcSolutions](#)

Great Falls, VA – epcSolutions invites you to a webinar on document tracking using GEN2 RFID on January 15th at 2:00 PM ET with speakers Kevin Kail, CEO and Chuck Williams, CTO, epcSolutions.

Company's documents are among their most valuable assets. The knowledge and intellectual property embedded in them needs to be properly preserved and maintained in order to maximize a company's value. Proper and efficient systems for document tracking are thus critical to the success of an organization. Law and accounting firms, hospitals, insurance agencies, and other offices around the world are all beginning to realize the tremendous benefits of document and file tracking systems utilizing RFID technologies.

By employing a document tracking system companies are able to know where important documents are located, who has what documents checked out and maintain a chain of custody and audit trail for business documents. epcSolutions' FixedAssetManager for Documents allows users to track the movement of documents in and out of areas, locate lost documents, associate documents to employees in the company and view an audit trail of documents movements at any time. FixedAssetManager for Documents can be run as a standalone system or integrated into existing document management solutions.

We invite you to join us and to hear about our solutions for the document tracking.

### About epcSolutions

epcSolutions, Inc. is the leading provider of RFID compliance software to the Wal\*Mart and DoD supplier community. epcSolutions' GS1Net3 application suite implements the GS1 System, a series of standards designed to improve supply chain management. The GS1 System includes: BarCodes - Numbering and bar coding; eCom - EDI (Electronic Data Interchange); Global Data Synchronization Network (GDSN) - data synchronization; EPCglobal - RFID (Radio Frequency Identification). The "Any Asset, One Network" application suite allows users to manage all four asset types found in a typical business: Work in Process, Finished Goods/Inventory, Fixed Assets and People.
