SherpaHost.com Offers Short Message Service (SMS)

Las Vegas, NV – SherpaHost has announced a new enhancement to its Web-based email product—short message service (SMS) integration, also called text-messaging service. The new feature lets subscribers to SherpaHost’s Web-based email instantly send text messages, as well as standard email.

With the texting feature in SherpaHost’s Webmail, users can instantly send emails and text messages at the same time----from a desktop PC or laptop. This convenience opens up new opportunities for sending messages to wireless phones.

Here’s how it works: SherpaHost customers can access their Web-based email accounts as normal, but now a drop-down menu gives an option to select email only, text message only or both. A simple cell phone field in the user’s address book drives the feature. In addition, SherpaHost includes a function that allows users to keep within the 160 character limit required by cell phone carriers for text messages.

Other available features in SherpaHost's personalized domain email plan include, 256-Bit Encryption, SMS/Text-Mail Service, Greeting Cards, Fraud Protection, Auto-Save, Spam Protection, Virus Protection, Desktop Notifier, Preferred Sender, Catch-all Address, SMTP (250/addresses), Message Preview, Drag & Drop Messages, Message Highlighting, Message Filtering, FREE Webmail including PDA/Handheld & Light versions, and Blackberry® compatibility.

For more information about SherpaHost’s email product, visit www.SherpaHost.com.

SherpaHost.com offers competitively-priced products, and delivering them all with world-class 24/7 live customer service.
