

iDTRONIC Electronic Identification presents two new RFID Desktop Readers for 125kHz and 13,56 MHz Systems

Date: 03-28-2008 03:11 PM CET

Category: [IT, New Media & Software](#)

Press release from: [iDTRONIC Electronic Identification GmbH](#)

March 27, 2008 - iDTRONIC, a leading supplier of RFID hardware solutions, today introduced two new AXR200 RFID Desktop Readers for reading and writing of both LF and HF Transponders.

The new Desktop Reader/Writer combines a very modern design with high functionality.

The 125 MHz version of the modern AXR200 Desktop Reader supports all EM 4102, 4105, 4550, NXP Hitag 1/2/S FDXB transponders. The 13.56 MHz version of the Desktop Reader is able to read and write all ISO15693 Transponders. The USB 2.0 Interface guarantees a very fast data transfer rate.

The AXR 200 supports the full ISO15693 functionality, allowing an easy integration of the Desktop Reader. A programmable Multi-Colour LED and Buzzer allows intuitive interaction of the Application with the reader/writer. The Desktop device is available with a black or white housing and a fully illuminated LED Frame.

The Software Development Kit (SDK) contains easy-to-implement High-Level-Interfaces and Windows DLLs which permits fast and reliable Integration in Third-Party Systems.

The reader/writer is well-suited for classic Desktop applications like reading and writing Cards and Transponders. It can be easily integrated with POS devices, but also can be used for Ticketing, payroll systems, time attendance, and access control systems.
