

NAB 2008 (C3-348): HS-ART releases new version of their Digital Film Restoration Software DIAMANT

Date: 04-01-2008 01:12 PM CET

Category: [IT, New Media & Software](#)

Press release from: [HS-ART Digital Service GmbH](#)

The award winning solution for automatic, semi-automatic and manual motion picture restoration is now available in version 2.3.

DIAMANT has been used successfully in film archives, post-houses, film studios and laboratories now for more than 6 years.

The DIAMANT suite includes tools for various types of film defects such as dust, dirt, blotches, flicker, scratches, grain/noise, warped images, stabilization issues and many more. The automatic and semi-automatic software tools allow effective corrections in almost all the cases.

A powerful solution for manual retouching called M.I.R. (moving image retoucher) is included in the DIAMANT suite, but can also be ordered as stand-alone product.

The software has been developed to work in a professional environment and does support a large amount of image file formats like DPX, CIN, TIFF, TGA, JPG, QuickTime® and many more. DIAMANT is available on Windows and runs on almost any modern standard PC hardware.

The archival restoration workflow could be improved due the cooperation of HS-ART with CTM Debrie and ARRI. The collaboration between their products and services boosts the efficiency of the overall restoration process.

In the latest version of the DIAMANT suite many features have been improved or added.

Such as:

- SpliceBump (new)
- ColorRegistration (new)
- SelectiveColor (new)
- Advanced support of alpha masks (new)
- DFlicker (improved)
- Dust (improved)
- DeadPixel (improved)
- DWarp (improved)

- M.I.R. paint tool (improved)
- RestorationManager (improved)
- MovieManager (improved)
- JobManager (improved)
- Overall performance (improved)
