Press release from: [Peak Beam Systems, Inc.](#)

June 6, 2008 – EDGEMONT, PA – Peak Beam Systems, Inc., manufacturer of high-intensity Maxa Beam searchlights, has introduced a Crew-Served Weapons Light (CSWL) Illumination System for heavy weapons. The weapon-mounted searchlight features a rugged, field-replaceable front lens and lamp assembly and a built-in interface that mounts the light to any M1913 “Picatinny” rail.

The Maxa Beam CSWL offers several unique capabilities including a Remote-Controlled Beam Width feature in which the operator can alter the beam width between a 1 degree spot and a 40 degree flood and a Non-Lethal Strobe function that effectively disables and disorients a target in situations where lethal force is not warranted. All of the Maxa Beam CSWL features are controlled with an easy-to-use tape switch mounted at the rear of the weapon. The Maxa Beam CSWL weighs just 3.85 pounds and offers an unparalleled 3000m visible/white light and 1200m infrared light range of illumination. The Maxa Beam CSWL system is rated at IP66, features Mil. Spec. metal connectors and has been tested extensively by the U.S. Special Forces at NSWC Crane and Fort Bragg.
