Press release from: [Infinite Energy Resources, LLC](#)

SANTA ROSA, NEW MEXICO, - June 6, 2008 : – Infinite Energy Resources, LLC, a leading developer of renewable wind and solar projects in the U.S. announced today that it has chosen to focus its latest development efforts in the State of New Mexico.

"We have identified three distinct geographic areas within the state and are aggressively performing development tasks on multiple renewable projects," said Michael Moretz, President of Infinite Energy. Infinite purchased a large tract near Santa Rosa, NM, and has leased thousands of additional acres from other large landowners in strategic areas throughout the state.

"As neighbors and tax paying members of the New Mexican economy, our company believes that property ownership gives us a unique perspective on the needs of the communities we serve." said Elsa Newland, CEO of Infinite Energy. She continued, "Our primary goal is to build wind and solar projects, not just tie up acreage. Our landowners have placed a tremendous amount of trust in the company. We share their values and know how important the revenue, taxes and jobs are to our partners and communities."

"New Mexico is blessed with excellent wind and solar resources," added Moretz. "Governor Richardson and New Mexican legislative bodies have aggressively developed financial incentives and transmission initiatives that make renewable energy development a high priority for the state."

Infinite Energy's renewable projects will be developed in multiple phases over the next ten years, with the first phase scheduled to be in operation within 24 to 48 months.
