New IIM system gives greater management capability with ZERO DC footprint

London, UK. 25 June 2008 — PANDUIT™ introduces an industry-first physical infrastructure management system that automates the documentation of physical layer connectivity and provides intelligent patch-field management without need for additional rack space. The PANVIEW iQ™ scanners, which in other systems take up 1 RU, have now been reduced in size and clip into the back of existing patch panels. This innovative design enables organisations to cost-effectively scale their installations as well as conserve valuable rack space and real estate space.

The new PANVIEW iQ™ System provides new functionality which:

- helps increase network reliability and availability by providing real-time information of network status
- helps keep your network secure by monitoring and alerting administrators of any patch field changes or potential security risks
- helps improve efficiency by facilitating steps 1-3 in ITIL V3; planning, implementation, and documentation of connectivity moves, adds, or changes
- further helps achieve ITIL compliance with Physical Inventory Location Tracking
- allows jobs to be run in parallel for increased time and cost savings. Therefore a Red work order can run simultaneously with a Green work order and a Yellow work order.
- is designed for easy integration into new and existing networks.

Part of PANVIEW iQ™ is the PANDUIT™ Physical Infrastructure Manager Software - a web-based application that offers robust performance functions, including automated documentation of network connectivity, change notifications, asset management and reporting, virtual server mapping, and work order management functions. The software enables the network manager to monitor the system remotely and securely. An Application Program Interface (API) built into the software allows integration between the PANVIEW iQ™ System and familiar third-party applications, so that the system slots easily into your existing network infrastructure.

David Palmer Stevens, Technology Manager at PANDUIT says, “The PANVIEW iQ™ System revolutionises the way network management systems perform, resulting in better infrastructure visibility and reduced network operational costs.”

PANDUIT is a leading, world-class developer and provider of innovative networking and electrical solutions. We engineer and manufacture leading edge products that assist our customers in the deployment of the latest technologies. Through PANDUIT Laboratories, our cross-functional R&D teams analyse and resolve complex technical challenges to address

specific industry and customer needs. Our global expertise and strong industry relationships provide businesses unmatched service and support that enable customers to move forward with their strategic objectives. For more than 50 years, our commitment to innovation, quality and service has created competitive advantages to earn customer preference. (www.panduit.com)
