Press release from: [IT IS AG](#)

Landshut – Houston July 17, 2008: IT IS activigence 2007 is the world's first and most advanced SharePoint Integration for Microsoft Dynamics. Today, web based customer data and business processes for intranet or extranet build on role based concept are mandatory. The advantages to the users: they don't have to think about the application that will solve their task, but instead is the task defines the area of information on the portal.

Around 1000 companies around the world are using IT IS products today. The best thing is: all of the customers that have signed a maintenance contract receive service packs without no additional cost. So what does this package offer?

IT IS activigence 2007 SP1 offers new functions and a solid and proven platform for web based collaboration. This extremely easy to configure Web Business Solution meets today requirements of being flexible, fast and safe in every aspect.

Basically, the web part technology is the key for this advantage. It builds upon universally reusable elements to present all business scenarios. This is starting with ordering processing through the CRM, travel cost or time planning and management to name a few examples. The delivery of information to either the company portal or to the vendors or customers works, and every scenario, every branch is supported.

One of the special elements of Service Pack 1 is the newly developed IT IS forms builder for IT IS activigence 2007. With this component, all of your current standard-like Dynamics NAV forms can be converted in to the IT IS activigence web part definition with the help of a graphic editor.

Some of the extended defined functions within Service Pack 1 are "custom actions" for sales and purchasing. New code functions calls are in for "improved invoice handling", "order to quote conversion", "posting process" and "approval". They act like the corresponding NAV functions.

Just as new: A global function that query the user name in Dynamics NAV for control of the workflow, logging and user logins for use in Navision Code.

The management and use of more portals is fundamentally better with Service Pack 1. Users can be bound towards a pre defined range of portals.

IT IS activigence 2007 with service pack one is sold exclusively through our more than 70 worldwide IT IS Software Partners. IT IS Partners are specially trained in the installation and implementation of our products to meet the varying customer requirements.
