Press release from: [Musicexplosion.biz](#)

There has been a lot of controversy regarding the legality of downloading files over the Internet. Downloads give members thousands of free mp3 songs, and movies with hundreds of hours of entertainment just by using their fingertips. However, the common way to do download mp3 music is illegal, but there is another method.

It's a fact that companies and individuals are getting sued for encouraging and downloading illegal music. The Recording Industry Association of America (RIAA) and their sister organizations in other countries, recently passed out large fines trying to prevent illegal mp3 downloads. Several music download networks, like Napster, Kazaa, Winmx have been stopped, Grokster and Morpheus faces an uncertain future.

So what will the future bring? Is it still legal to download mp3 music?

The answer is YES there are tons of websites in various sizes and shapes that are publishing free legal mp3 music.

After the close down of the big file sharing networks there are many pay sites that have licensing agreements with the entertainment industry, such as Apple, iTunes and Yahoo Music. Unfortunately these top profile download sites often charge large fees for their mp3 download access.

Alternatives have risen that give the same amount of content, but for free or a one time fee. Search the net for the free alternatives to Apple, iTunes and Yahoo Music and an amazing amount of websites can be found. The huge amount of free mp3 downloads available will keep both the heart and wallet happy.
