Category: [IT, New Media & Software](#)

Press release from: [IT-Services Thomas Holz](#)

August 26, 2008, Dormagen, Germany – IT-Services Thomas Holz has released version 2.05 of the logo creation software Company Logo Designer. The worldwide unique software allows everybody to design create brilliant company logos within minutes – no graphical experience required.

The new ProTrial Edition is remarkable. It's free and contains 450 logo design templates. They come from the 50 templates of the exist Trial Edition, 200 templates from the logo packs and another 200 from the Comfort Edition. All included for free in the ProTrial Edition

All templates can be edited by the user. And that's very easy. All one has to do it select the logo that looks best. In contrast to other imaging application one doesn't have to know or understand dozens of tools - the software does the design work and presents a variety of logos. One simply has to click on one's favorite. It will be modified and enhanced further and further until the perfect logo is found.

That way one has drastically more influence over the logo. Instead of giving a design order to an external agency and waiting for a result (which one may not like), one has every step under control.

In order to make it easy for the user, there are a lot of complex algorithms "under the hood": The logo-engine combines and creates logos using genetic algorithms, creating an incredible multitude of designs. Just a mouse-click away.
