

GrokThis Manager 2.0 Released

Date: 08-29-2008 03:01 PM CET

Category: [IT, New Media & Software](#)

Press release from: [GrokThis.net](#)

GrokThis.net Internet Services

GrokThis.net has released version 2.0 their open source web-hosting management environment, GrokThis Manager (GTM).

The GTM software features configuration and management of MySQL databases, email accounts (Postfix/Cyrus), and general account management. Newly introduced in version 2.0 is web-based management, in addition to the classic menu-driven, command-line interface. Additionally, the new application is extensible by developers, offering a public API.

Different from other web-based administration software, GTM runs from Apache and requires no special daemon/services to be present on the server.

GrokThis.net is pleased to offer this exciting upgrade to customers, and invites all to download, view, and extend the GPLv3 licensed source code. The source code is available via public FTP at <ftp.grokthis.net>.
