New York, New York, September 15, 2008 – Stampede® Technologies, Inc. (stampede.com), a leading provider of WAN Optimization and Application Acceleration solutions, today announced that it is previewing the newest in its arsenal of application acceleration solutions at Interop® New York. The company is announcing the new Stampede Remote Campus Optimizer® this week at Interop, in New York’s Javits Center, September 15-19, Booth 1145. Designed to optimize efficiency for application traffic flow between an application data centers and remote locations, the new Stampede Remote Campus Optimizer, which is software that runs on Linux appliances, will be available to OEM partners in Q4 2008.

Stampede’s new Remote Campus Optimizer (RCO) makes WAN access more like LAN access by facilitating easier, more responsive and more efficient remote user application access. The “Stampede Remote Campus Optimizer (the RCO)” accelerates most traffic between a remote branch and a data center by sitting “in-line” as a transparent bridge. The RCO runs on a dedicated appliance with special network hardware that enables it to go into pass-through if taken out of service. The RCO accelerates multiple protocols, including HTTP, Microsoft Exchange (MAPI), CIFS, FTP, POP3, SMTP, and many others. Working in conjunction with the Stampede Acceleration Series® (SAAS), the new RCO enhances acceleration by combining protocol-specific optimization techniques along with compression technology, and Stampede’s patented Turbostreaming®. The RCO makes remote application use 4-10x faster and more efficient, reducing bandwidth usage by 70-90%. By partnering with OEMs who will bring their own hardware to the total solution, the RCO will put an affordable Wan Optimization Solution on the market for small and medium size accounts who previously could not afford Enterprise level WOC products.

“There is no question that central hosting and management of applications and data is more practical for the SMB market in terms of hardware, software and facilities investment and maintenance,” said Gordon Dorworth, Stampede Technologies’ President and CEO. “The issues to be overcome are efficiency for the user end and the cost of bandwidth. Stampede has earned our reputation in delivering application acceleration solutions for over 14 years, and the new RCO marks a huge breakthrough in remote application efficiency—at an attractive price point – so that any size account can afford the benefits of WAN Optimization”

About Interop®

Interop® drives the adoption of technology, providing knowledge and insight to help IT and corporate decision-makers achieve business success. Part of TechWeb’s family of global brands, Interop is the leading business technology event series. Through in-depth educational programs, workshops, real-world demonstrations and live technology implementations in its unique InteropNet and InteropLabs programs, Interop provides the forum for the most powerful innovations and solutions the industry has to offer. For more information about these events visit www.interop.com.

About Stampede Technologies, Inc.

Stampede Technologies is a pioneering innovator of Internet acceleration systems and enterprise network performance solutions. The new Stampede Application Acceleration Series™ combines Stampede's decade of experience in accelerating network-intrusive IP-based applications with Stampede's unique Acceleration On Demand® optimization injection technology and the ground-breaking Stampede Web 2.0 Performance Series to dramatically elevate our customers' online productivity and enhance how they use the Internet to communicate and interact with their employees, partners and customers. When your enterprise applications are operating at top speed, maximum performance and total business value, it's a Stampede! For more information on Stampede Technologies, visit www.stampede.com.

Stampede and Acceleration On-Demand are registered trademarks and Stampede Application Acceleration Series is a trademark of Stampede Technologies, Inc. All other trademarks and registered trademarks are the property of their respective owners.
