Press release from: [IDAutomation.com, Inc](#)

(Tampa, FL.) IDAutomation.com, Inc. announces a major update to its Java Barcode Packages, which now includes new functionality to support Aztec in the Java 2D Barcode Package. The Aztec barcode created meets AIM Specification ANSI/AIM BC13 ISS Aztec Code. This Aztec matrix generation comes with automatic mode selection and meets GS1 compatibility.

The JavaBeans, Applets, Servlets and Class Libraries in this package may be used on any platform with a Java Virtual Machine, including Windows®, LINUX, MacOS, Solaris, HP/UX, AS/400 and OS/390 to integrate automated bar coding into internet applications, websites or custom Java applications. Website designers will find the barcode servlets and applets efficient and easy to use. The servlets and applets require no programming and may be inserted in dynamic HTML with a simple IMG or Applet tag. All popular barcode types are supported including PDF417, Code 39, Code 128, UCC128, Interleaved 2 of 5, UPC, EAN, POSTNET, DataMatrix, Aztec and MaxiCode. Barcode Servlets are the best components to use for barcoding on the Internet because they are compatible with all operating systems and browsers.

A free demo of the product is available by download at [www.idautomation.com/java/](http://www.idautomation.com/java/). Single server licenses for the Java barcode products start at \$199 USD and royalty free site or distribution licenses start at \$790. IDAutomation provides barcode fonts, components and software applications that support several barcode types. IDAutomation.com, Inc. has been marketing products for businesses since 1996 and is privately held. For more information, visit their website at [www.idautomation.com/](http://www.idautomation.com/).

###
