Press release from: [Solix Technologies](#)

SANTA CLARA, Calif., September 22, 2008 – Solix Technologies, a leading provider of Enterprise Data Management Solutions used by large enterprise customers to manage business critical data, today announced that the Solix Enterprise Data Management Suite (Solix EDMS) supports Oracle® Universal Online Archive.

Solix EDMS addresses both compliance and information lifecycle management (ILM) requirements through four complementary solutions: Solix Enterprise Archiving, Solix Secure Test and Development, Solix Application Sunsetting and Migration, and Solix Data Auditor.

Using Solix EDMS in conjunction with Oracle Universal Online Archive, customers can meet long-term data retention requirements and aggregate content into a single-instance storage model. This helps eliminate the need for multiple archive servers and reduce information silos, so customers can more easily meet their governance policies while lowering their regulatory compliance costs. Adding the Oracle Database 11g Advanced Compression option enables de-duplication and compression that allows customers to further reduce total storage costs.

“We all know the value of having a robust, enterprise-scalable repository that allows customers to trust that their content is secure,” said Rich Buchheim, Senior Director of Development, Oracle. “Having a single source of truth that has a formal retention policy means that information is securely preserved and also reliably destroyed when it reaches end of life.”

Ever increasing regulatory and compliance requirements are necessitating government and businesses to retain an accurate record of regulated transaction history over a number of years. Grand archiving of data, metadata and attachments from Enterprise Applications into Oracle Universal Online Archive using the Solix EDMS, allows long term retention management, as well as rapid online search and eDiscovery of historical transactional content.

Added to the earlier integration of Solix EDMS with Oracle Database 11g option Total Recall and Flashback Data Archive – thereby transparently tracking data changes down to the record level so that every version of the record can be recovered and viewed back to a specific point in time – the Solix EDMS integration with Oracle Universal Online Archive now delivers an unparalleled solution for long term management for massive volumes of historical information of all data types.

“Solix EDMS provides core value-add extensions to Oracle Database and Oracle Fusion Middleware technologies that improve the functionality, ease-of-use and cross-platform interoperability of the Oracle Database and Oracle Enterprise Content Management platform for IT departments and end-users,” said Shekhar Dasgupta, Chief Operating Officer, Solix Technologies. “We believe this integration provides effective Enterprise Data Management that helps lower infrastructure costs and improve application performance, and builds a solid foundation for eDiscovery.”
