Press release from: [froglogic GmbH](#)

Rennes, France and Hamburg, Germany September 29, 2008 - Kereval and froglogic GmbH today announced to form an alliance to supply Squish users in France with expert consulting services to get the most out of automated Squish GUI tests.

Kereval already provided consulting services to Squish clients such as the France Telecom. As an official froglogic consulting and service partner, Kereval will offer a whole set of Squish services.

"For the continued success of the Squish GUI testing tool we heavily rely on regional partners providing additional services to our clients. We are glad to have Kereval on board to support our French customers.", said Reginald Stadlbauer, CEO of froglogic.

"KEREVAL tests different types of applications developed with different technologies. Of of them is Qt. Squish is the best automated testing tool we found to test GUI application developed with Qt so we recommend it to our customers to use it." said Alain Ribault CTO of Kereval "In addition, Squish allows us to deploy our test automation process as we successfully did for our client Orange Labs by developing maintainable tests targeted for different platforms." said Jean-Marie Hallouët, QA test engineer at Kereval

About Kereval

KEREVAL, located in Rennes, France, is a software testing laboratory specializing in components, software solutions and architecture qualification. Independent of any testing tools editor, KEREVAL provides third-party testing and qualification services, from conformance to security and quality of service testing, in computer IT as well as in embedded systems. Dedicating more than 30 percent of its workload to R&D, KEREVAL has developed collaborations with research labs, such as Inria, Supelec, Istia and France Telecom R&D.

About froglogic

froglogic GmbH is a software company based in Hamburg, Germany. Their flagship product is Squish, the market-leading automated testing tool for GUI applications based on Qt, Java AWT/Swing and SWT/RCP, Mac OS X Carbon/Cocoa and for HTML/Ajax-based web applications running in different web browsers. froglogic also offers services in the areas QA/automated testing and Qt C++ programming and consulting.
