Press release from: [Mindbreeze Software GmbH](#)

US magazine KMWorld acclaims the "hottest" products of the year.

The US magazine KMWorld was highly impressed by the quickly deployable and efficient discovery of relevant information within widespread data containers throughout the entire company and the outstanding integration possibilities of Mindbreeze Enterprise Search in third-party products.

Mindbreeze Enterprise Search searches interlinked information sources (email systems, file systems, pages on the intranet or internet, Deep Web portals and other interlinked applications) throughout the entire company for relevant information, regardless of where the data was originally stored. Users initiate a search, locate the desired information and can then work with it in seamless context. This saves both time and stress.

"For us as a young, Austrian company, we are absolutely delighted about this prestigious acclaim for Mindbreeze Enterprise Search. It is very pleasing to see how extensively our software is used by customers and partners," says Daniel Fallmann, Managing Director of Mindbreeze Software GmbH.

The hits that appear always contain only the information that the respective user is authorised to see. This means that it is possible to use Mindbreeze Enterprise Search quickly and reliably throughout all levels of the company without any additional investment. The search results can be processed straight from the hit list instead of being traced back to the origin of the source. Actions that are available in the respective application are simply displayed in the search result on the hit list. Even complex processes such as PDF conversion or workflow-based actions can thus be handled intuitively by the users.

Says Hugh McKellar, KMWorld editor-in-chief, "This year's edition has been compiled through briefings with vendors themselves, along with conversations with analysts, users and system integrators. Our mission selecting this year's products has been deceptively simple: select those that deliver robust customer value."

With the Mindbreeze Enterprise Search SDK (Software Developer Kit), Mindbreeze Enterprise Search also offers a high-performance platform that enables developers to use the capabilities and benefits of Mindbreeze Enterprise Search in their own applications.

A 30-day version of Mindbreeze Enterprise Search Version can be downloaded free of charge from www.mindbreeze.com.

About KMWorld

KMWorld (www.kmworld.com) is the leading information provider serving the Knowledge Management systems market and covers the latest in Content, Document and Knowledge Management, informing more than 50,000 subscribers about the components and processes - and subsequent success stories - that together offer solutions for improving business performance. KMWorld is a publishing unit of Information Today, Inc. (www.infotoday.com)

About Mindbreeze

With Mindbreeze Enterprise Search and the Mindbreeze Enterprise Search platform, Mindbreeze Software GmbH (

www.mindbreeze.com) offers an easy to use and powerful tool which makes it possible to link the application context to search results. It makes a search result more than just a collection of references: instead it enables users to execute precisely those actions that are also possible with the respective object in the application itself and bring together information in complex background actions. Mindbreeze Enterprise Search helps users to find the exact and really relevant information quickly.
