Press release from: [Web Service Guard](#)

Orlando, Fla., October 21, 2008 – Web Service Guard LLC, a web site monitoring service, announced today that their website monitoring service shows that the web sites they are monitoring, on average, have a downtime of 77 minutes per month.

Many companies rely on the Internet as their primary sales and marketing funnel. Web site downtime can lead to lost revenue, lost customers and damaged public image. When visitors arrive at a company's website and find that it's experiencing downtime, they may question if the company has gone out of business.

“With the competitiveness of the online marketplace today, it is vital to have your site working around the clock,” vice president of operations Steve Walterhouse said. “We provide valuable information on the status of our customer's web site. They can now know in seconds that their website is down so they can address the cause.”

Web Service Guard specializes in helping clients monitor their web sites for problems to keep outages to a minimum. While the Internet's 24-hour-a-day, seven-days-a-week availability makes it ideal for attracting customers round the clock, outages can be costly. If businesses are not immediately aware of site unavailability in order to correct the problem, clients can be lost. But most business owners don't have time to check their site every minute of the day. Web Service Guard provides around-the-clock monitoring with immediate alerts so business owners can be notified of problems quickly.

About Web Service Guard:

Web Service Guard specializes in monitoring web sites for potential outages and sending immediate notifications to business owners. Web site outages can be costly and deter web surfers from becoming potential clients. For less than a cup of coffee a day, business owners can rest easy knowing that Web Service Guard is monitoring their sites and will immediately notify them of any unavailability problems so they can be corrected in a timely fashion.
